Changes for this release

Description of change	Images	Styles	Scripts	Includes	Template
Added content type to display survey information	-	Yes	-	-	-
Added content type - Call out box	-	Yes	-	-	-
Provided additional styles to aggregation page model	-	Yes	-	-	-
Updated copyrights in footer	-	-	-	Yes	-

Added content type to display survey information

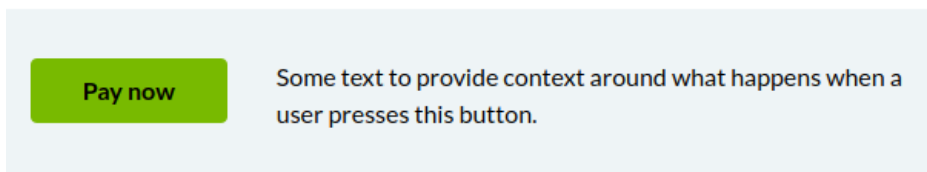

This could be used to display survey link to the users.

```
<div class="qg-survey">
  <h2>Tell us what you think about our
website</h2>
  <p>Is there anything we could improve?</p>
  <a class="qg-btn"
href="link-to-survey-form">Let us know</a>
</div>
```

Added content type - Call out box

This component supports having some contextual text to accompany the button.

```
<div class="qg-call-out-box">
  <a class="qg-btn btn-primary" href="">Pay
  now</a>
  <p>Some text to provide context around what
  happens when a user presses this button.</p>
</div>
```

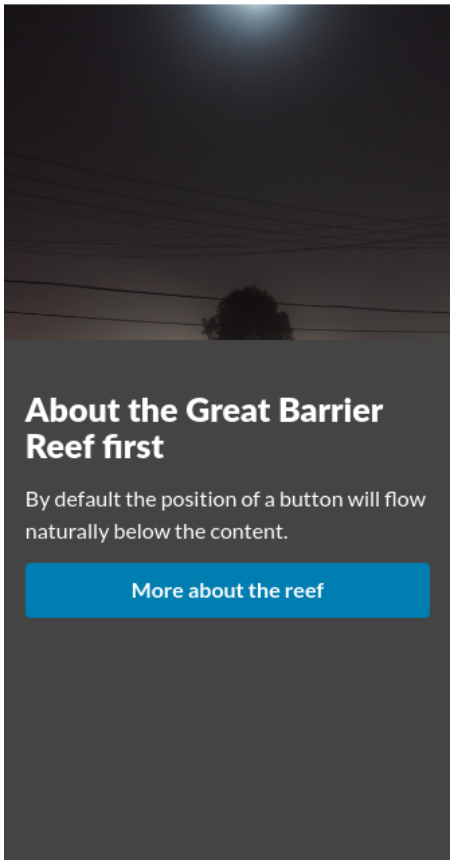

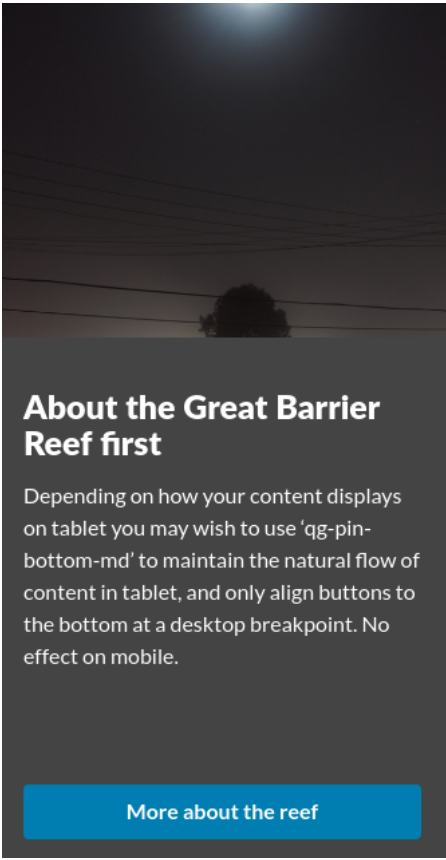

Provided additional styles to aggregation page model

Provided 2 classes '**qg-pin-bottom**', '**qg-pin-bottom-md**' to align button or any other element to bottom of the card.

By default the position of a button will flow naturally below the content.

Adding the class '**qg-pin-bottom**' will make the button sticks to the bottom of the card. This can be helpful if you are concerned that buttons appearing at different heights are creating visual confusion. No effect on mobile.

Depending on how your content displays on tablet you may wish to use '**qg-pin-bottom-md**' to maintain the natural flow of content in tablet, and only align buttons to the bottom at a desktop break point. No effect on mobile.

Default	qg-pin-bottom / qg-pin-bottom-md (only on desktop)
 <p>About the Great Barrier Reef first</p> <p>By default the position of a button will flow naturally below the content.</p> <p>More about the reef</p>	 <p>About the Great Barrier Reef first</p> <p>Depending on how your content displays on tablet you may wish to use 'qg-pin-bottom-md' to maintain the natural flow of content in tablet, and only align buttons to the bottom at a desktop breakpoint. No effect on mobile.</p> <p>More about the reef</p>
